

MB P-10 (MANUAL BLOCK PRESS)

Now you can produce block ice in limited quantities without a large capital expense. Block ice is excellent for marinas, campgrounds, construction sites and as additions to the normal packaged ice sale. Block ice requires about 50% less volume in the merchandiser and can often demand a 50% higher markup. This combination of less space and higher margins means greater profits for the supplier of block ice while giving greater customer satisfaction.

The Vogt Manual Block Press is a compact, self-contained press for the manufacture of ice blocks from ice particles. The particles may range from fine to large fragments.

FEATURES

- Easy, quick latch design on lid
- Ice chamber is fully nickel-plated
- All exposed bolts are stainless steel
- Industrial-quality hydraulics

SPECIFICATIONS

Block size: 6" x 6" x desired length (up to 12")

Block weight: Approximately 1.15 #/inch of length (e.g. 12" block = 14 lbs)

Operating pressure: Maximum 2500#/sq. in.

Electrical requirements: 230/460V, 3 phase, 60 hertz. (Other voltages upon request)

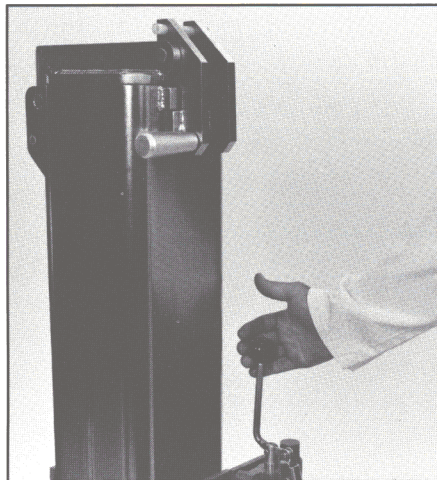

Warranty: One (1) full year on defective parts and workmanship. Does not include labor or freight.

MB P-10 (MANUAL BLOCK PRESS)
