

VT Series Identification

VT-A Series

The VT Series began production in late 1999 with serial number date codes beginning with 99N and continued until late 2000 ending with serial number date code 00K. The main distinguishing characteristics of the A-Series are a belt-driven chopper, a cam timer to control the operation and a stainless steel water tank.

VT-B Series

The VT-B Series was introduced in 2001 with serial number date codes beginning with 00M. The water distribution chamber and the water tank were redesigned and constructed of low-density polyethylene plastic. Also, the chopper drive was changed from belt driven to direct drive and the cam timer was replaced by a PLC.
